Forecast

Learning Outcomes for this week:

- Understand the rationale for our course's structure, the why of our module
- Recall the components of the course and their weightages and general deadlines
- Execute a basic machine learning workflow in Google Colab
- Conceptualize the division of labor in a typical machine learning project

Difference Between AI, Machine Learning, and Learning

Machine learning, and deep learning are terms that are often used interchangeably. But they are not the same things.

May 14, 2015 · 18

The standard joke about artificial intelligence (AI) is that, like nuclear fusion, it has been the future for more than half a century now. AI is in the news again, for there has been impressive progress in the past few years in a particular subfield of AI called machine learning. But what exactly is that? The Economist explains how machine learning works

When TensorFlow was first launched in 2015, we wanted it to be an “open source machine learning framework for everyone”. To do that, we need to run on as many of the platforms that people are using as possible. We’ve long supported Linux, MacOS, Windows, iOS, and Android, but despite the heroic efforts of many contributors, running TensorFlow on a Raspberry Pi has involved a lot of work. Thanks to a collaboration with the Raspberry Pi Foundation, we’re now happy to say that the latest 1.9 release of TensorFlow can be installed from pre-built binaries using Python’s pip package system! If you’re running Raspbian 9 (stretch), you can install it by running these two commands from a terminal:

Course Characteristics

CS3244 Machine Learning

Department of Computer Science
School of Computing

Above the Hood

- “Big Picture” applications
- Set up and go
- Hands-on exercises
- Connection with Industry
- Mock Job Interview

For executive and continuing lifelong education.

Below the Hood

- Mathematical Details
- Occasional Proofs

The math is important for mastery and grounding insight, but most of us will forget the details in the long run.

Barriers to success in this course

- **Serious** Math.
 - Probability and Statistics
 - Linear Algebra
- Programming competence.
- E Learning course implementation.

Will need your support and understanding –
please offer critical feedback to us too.

Python & Jupyter

We'll be using the Python programming language for our entire class homework assignments, in particular the **3.7.11 version (currently default version in Colab)**.

We'll also be using Jupyter / iPython Notebooks to show and simulate experiments.

Google has a very nice, convenient Python-in-a-browser experience, Colab, which we'll take advantage of.

Python is an easy language to transition to for most programmers and it has numerous libraries that work well with machine learning as well as data analysis.

Course Components

CS3244 Machine Learning

Department of Computer Science
School of Computing

Components

55% **Assessments**

1. Final 35%
2. Midterm 20%

10% **Participation**

1. Tutorial (Colab Notebooks and Participation)
2. Pre-lecture Activities
3. In-Lecture Activities

35% **Assignments**

1. Individual Assignment 10%
2. Group Project 25%
 - 2.1 Proposal
 - 2.2 Presentation
 - 2.3 Peer Review

1. Lectures – Synchronous Zoom

*(Better learning outcomes
when you are here with us)*

	Week t	Week $t + 1$
Mon	Lecture [1]	Tutorials for Week t
Tue		
Wed		
Thu	Lecture [2]	
Fri		
Sat		
Sun		

*Most lecture activity will occur
during our Monday 2-hour slot.*

Every week you will:

1. Do the pre-lecture activity and discuss within your tutorial group before Week t 's Monday lecture.
2. Attend lecture (in person or online) and participate in the in-lecture activity on Week t .
3. Reinforce concepts in the tutorial on Week $t + 1$.

Contributes towards
the 10%
participation grade

[Install](#) on your computer **and** smartphone.

<https://bit.ly/cs3244-join-slack>

Use your NUS @nus.edu.sg or @u.nus.edu address.

Optional In-class lecture

Come down to the LT for lecture!

Lecture[1] Mon 16:00–18:00: **i3 Aud**

Lecture[2] Thu 11:00–12:00: **LT 15**

You must be one of the first n students to emote on the Week t lecture post in Slack to secure a seat.

Make sure you do your temperature declaration before coming to campus to attend lecture.

Thu Lecture: other activities and AMA

(Get answers when you have questions)

On lighter weeks we'll use the Thursday lecture slot for auxiliary activities. Occasionally there will be no activities, so we'll schedule an AMA session.

Ask Me Anything (AMA) sessions are purely voluntary. We'll be recapping what was covered in the previous lectures or tutorials first. Then cover your questions and get to know you better.

2. Assessment

(Practice before ~~Perfect~~ more practice)

Individually done. Class integrity policy applies.

Executed in Weeks 03–05.

“Classic” tabular machine learning assignment via Google Colab.

Simplified evaluation.

Run through the whole cycle of a machine learning application.

More formative than summative.

10% of your
total grade

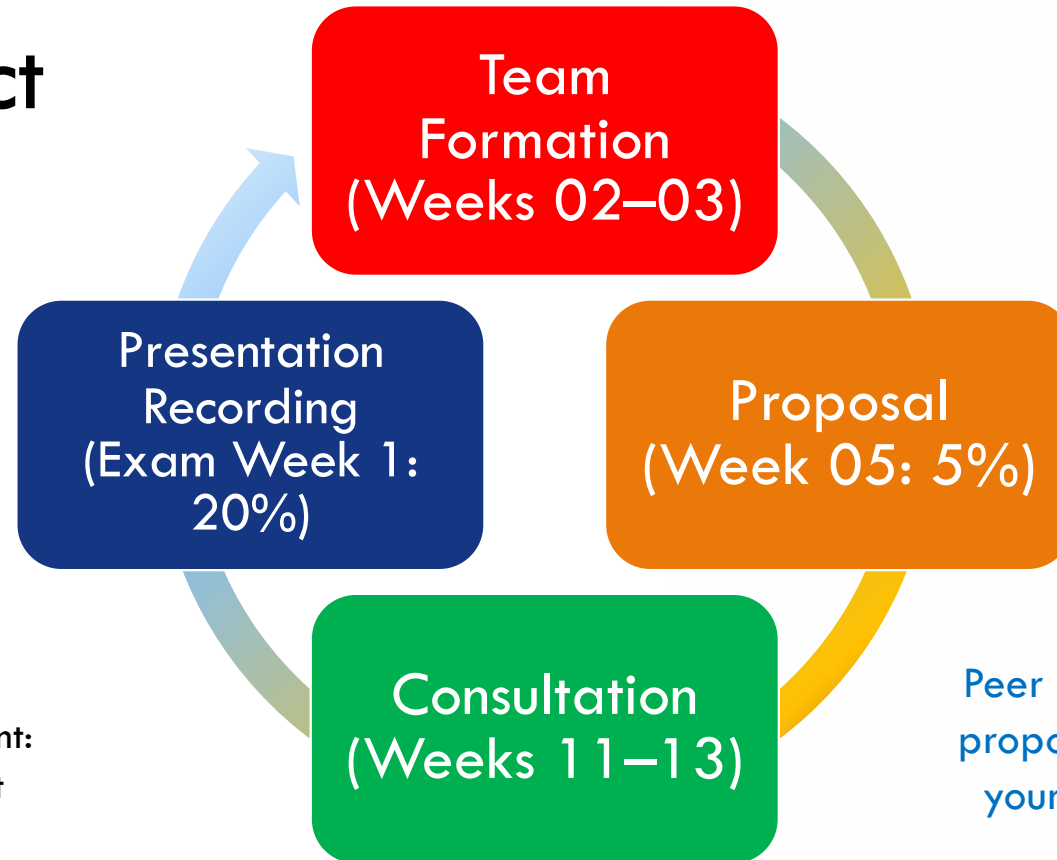

3. Project

*(In-depth, group
self-determined
immersive project)*

Weeks 05–15.

Peer and
Instruction Staff
Review.

Emphasis on
summative assessment:
Can you apply what
you've learned?

25% of your
total grade

Peer critique of the
proposal as part of
your final grade.

Computing Support

We are rounding up computation support from both Google Education and School of Computing to support your projects.

- Dedicated GPU compute hosts from SoC's cluster
- Google Compute Cloud credits (usable for Colab VM)

Computing Support – SoC

Non-SoC students should visit <https://mysoc.nus.edu.sg/~newacct> to create/re-enable their SoC account.

We have reserved **xgpf0-9** for CS3244 from **4 Oct (Week 8)** to **12 Nov (Week 13)**. **[We may try to extend this lease]**

xgpf0 - xgpf9	10	Ubuntu	2 x Xeon Silver 4116 (2.1Ghz)	256GB DDR4	960GB SSD & 3.84TB SSD	10GbE	1x NVIDIA Tesla T4 GPU	2019	Asus
------------------	----	--------	-------------------------------------	---------------	------------------------------	-------	------------------------------	------	------

Computing Support – Google

Google Workspace for Education is sponsoring USD \$50 per student for compute.

More details to be announced later.

Intra-team Peer Evaluation: TEAMMATES

- Exam Week 2.
- 5-6 students per group.
- Depending on your peer feedback, you may get the same, lower, or higher grade than your group grade.

4. Tutorials via Zoom

(Face to face check on your understanding in groups)

Tutorials start in Week 03 and will be likely be entirely online in Zoom.

Have another connected device (e.g., phone) ready for warm-up exercises.

	1000	1100	1200	1300	1400	1500	1600	1700	1800
Mon			Tutorial [06]	Tutorial [01]	Tutorial [04]	Tutorial [03]	Lecture [1]		
Tue			Tutorial [11]	Tutorial [12]		Tutorial [09]	Tutorial [10]		
Wed	Tutorial [08]	Tutorial [05]				Tutorial [07]	Tutorial [02]		
Thu		Lecture [2]							
Fri									

Tutorial Activities

(Let's mix it up)

Tutorials will vary in their activities, to be led by the tutorial leader:

- “Standard” tutorial: recap of lecture materials and practice questions;
- Hands-on activities, akin to “labs” via Google Colab.
- Later in the semester, project consultations.
- Last tutorial: exam (p)review.

5. Assessments

(Primary assessment of the basic concepts)

Midterm (20%)

- Mon 27 Sep (Week 07) 16:00–17:00
- Covers Weeks 01–06

Final (35%)

- Wed 24 Nov (Exam Week 1; Week 15) 17:00–19:00
- Emphasis on Weeks 07–13, but also touches on earlier foundations

Both Open Book

55% of your
grade in total

6. Student XP

(Keeping tabs on your personalized progress in the course)

Clear student learning outcomes for each component and subcomponent.

We'll be tracking your progress through your pre- and in-lecture activities, along with your tutorial participation.

Occasional interviews with machine learning experts in our school and community.

Course Schedule

CS3244 Machine Learning

Department of Computer Science
School of Computing

Student Learning Outcomes (SLOs)

1. Understand the **basic** concepts of machine learning.
2. Apply an appropriate machine learning **algorithm** for a given problem.
3. **Evaluate** the performance of a machine learning solution.
4. Use a machine learning tool to carry out machine learning **experiments**.

Weeks	Lecture Topics	Deliverables (90%)	
<u>The Basics</u> (Weeks 01–06)	<ul style="list-style-type: none">• Intro to the ML Pipeline (SLO1)• Fundamental Theory (SLO1)• Basic Models (SLO2)		Assignment (10%)
Recess			
<u>Widening and Deepening</u> (Weeks 07–13)	<ul style="list-style-type: none">• Preprocessing (SLO1)• Visualization (SLO1)• Evaluation (SLO3)• Explanation (SLO3)• Neural Networks (SLO2)• Deep Learning (SLO2)• Unsupervised & Semi-Supervised (SLO1)	Midterm (20%)	Project (25%)

11	Unsupervised ML	Deep Learning		
12	Open Project Consulting	Unsupervised ML		
13	ML Ethics and Revision	Practice Exams		<i>Project</i>
Reading				
Exam 1			2-hour Final Assessment (Wed, 24 Nov)	Recorded Project Presentation (Sun, 28 Nov)

Course Policy

CS3244 Machine Learning

Department of Computer Science
School of Computing

Academic Integrity: Freedom of Information Rule

Collaboration is acceptable and encouraged.

To assure that all collaboration is on the level,
you must always fill in the name(s) of your collaborators on your assignments and project work.

You will be assessed for the parts for which you claim is your own contribution.

Academic Independence

You are free to meet with fellow students(s) and discuss assignments with them.

Writing on a board or shared piece of paper is acceptable during the meeting; however, you **may not take any written (electronic or otherwise) record away from the meeting.**

After the meeting, do something else for at least a half-hour (nap, TikTok, or doing an assignment for a different class), before working on the assignment.

This will assure that you are able to reconstruct what you learned from the meeting, **by yourself, using your own brain.**

You will be asked to certify that you meet this requirement per assessment.

Punctuality (Lateness)

5% of your grade for every day of lateness; starts at midnight by LumiNUS' records; capped to 40% as a maximum deduction.

This is a large class, and grading your assessments takes significant time. For us to release feedback on time to help you troubleshoot accordingly, we need you to be timely.

Online Procedures

CS3244 Machine Learning

Department of Computer Science
School of Computing

Zoom Etiquette for Tutorial

Each tutorial will have a tutorial leader.

Have your video on where possible, especially during breakout activities.

Leaders will be giving the tutorial, but occasionally other tutors and staff will sit in to observe the tutor (not you :D)

Be familiar with polling, changing your name, screen annotation, and chat.

Zoom Exam Procedure

Midterm on Monday of Week 07;
Final on Wednesday of Exam Week 1 (Week 15).

Each exam is multipart, where you may not revisit the previous parts.
Short washroom break between parts.

Proctoring by standard e-learning protocol: Zoom gallery and ffmpeg desktop recording.

- Zoom: set up a side camera or external webcam and connect to the proctor.
- ffmpeg: record your single screen desktop and upload to LumiNUS.
- There'll be a physical option in **i3 Auditorium**.
